

QUICK SORT

QUICK SORT

This sorting algorithm uses the idea of divide and conquer.

It finds the element called **pivot** which divides the array into two halves in such a way that elements in the left half are smaller than pivot and elements in the right half are greater than pivot.

QUICK SORT

Three steps

- Find pivot that divides the array into two halves.
- Quick sort the left half.
- Quick sort the right half.

Example

Consider an array having 6 elements

5 2 6 1 3 4

Arrange the elements in ascending order using
quick sort algorithm

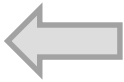

This is our unsorted array

Array index	0	1	2	3	4	5
Array element	5	2	6	1	3	4

This is our unsorted array

Array index	0	1	2	3	4	5
Array element	5	2	6	1	3	4

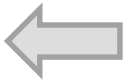

Left

This is our unsorted array

Array index	0	1	2	3	4	5
Array element	5	2	6	1	3	4

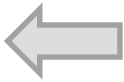

Left

Initially pointing to the
First element of the array

This is our unsorted array

Array index	0	1	2	3	4	5
Array element	5	2	6	1	3	4

Left

Initially pointing to the
First element of the array

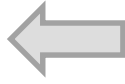

Right

This is our unsorted array

Array index	0	1	2	3	4	5
Array element	5	2	6	1	3	4

Left

Initially pointing to the
First element of the array

Right

Initially pointing to the
Last element of the array

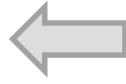

Pivot

This is our unsorted array

Array index	0	1	2	3	4	5
Array element	5	2	6	1	3	4

Left

Initially pointing to the
First element of the array

Right

Initially pointing to the
Last element of the array

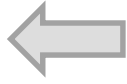

Initially pointing to the
First element

Pivot

This is our unsorted array

Array index	0	1	2	3	4	5
Array element	5	2	6	1	3	4

Left

Initially pointing to the
First element of the array

Right

Initially pointing to the
Last element of the array

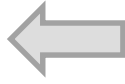

Initially pointing to the
First element

Pivot

This is our unsorted array

Array index	0	1	2	3	4	5
Array element	5	2	6	1	3	4

We will quick sort this array

Left

Right

Initially pointing to the
First element of the array

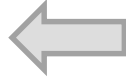

Initially pointing to the
Last element of the array

Pivot

0	1	2	3	4	5
5	2	6	1	3	4

Left

Right

Remember this rule:

Pivot

0	1	2	3	4	5
5	2	6	1	3	4

Left

Right

Remember this rule:

All element to the **RIGHT** of pivot be **GREATER** than pivot.

Pivot									
		0	1	2	3	4	5		
		5	2	6	1	3	4		

Remember this rule:

All element to the **RIGHT** of pivot be **GREATER** than pivot.

All element to the **LEFT** of pivot be **SMALLER** than pivot.

Pivot									
		0	1	2	3	4	5		
		5	2	6	1	3	4		

As the pivot
is pointing at
left

Pivot

0	1	2	3	4	5
5	2	6	1	3	4

Left

Right

As the pivot
is pointing at
left

So we will start
from right

Pivot

0	1	2	3	4	5
5	2	6	1	3	4

Left

Right

As the pivot
is pointing at
left

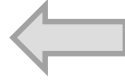

So we will start
from right

And move towards left

Pivot

0	1	2	3	4	5
5	2	6	1	3	4

Left

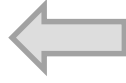

Right

Pivot

0	1	2	3	4	5
5	2	6	1	3	4

Left

Right

Pivot = 5
Right = 4

Is Pivot < Right

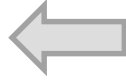

(5 < 4)

Pivot = 5
Right = 4

Pivot

0	1	2	3	4	5
5	2	6	1	3	4

Left

Right

Is Pivot < Right

(5 < 4)

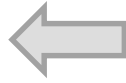

Pivot = 5
Right = 4

NO

Pivot

0	1	2	3	4	5
5	2	6	1	3	4

Left

Right

Is Pivot < Right

(5 < 4)

Pivot = 5
Right = 4

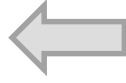

NO

So we swap pivot and right

Pivot

0	1	2	3	4	5
5	2	6	1	3	4

Left

Right

Is Pivot < Right

(5 < 4)

Pivot = 5
Right = 4

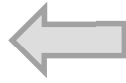

NO

So we swap pivot and right

Pivot

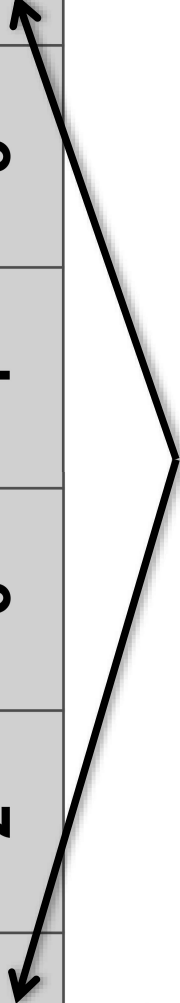

0	1	2	3	4	5
5	2	6	1	3	4

Left

Right

Is Pivot < Right

(5 < 4)

Pivot = 5
Right = 4

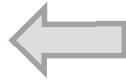

NO

So we swap pivot and right

Pivot

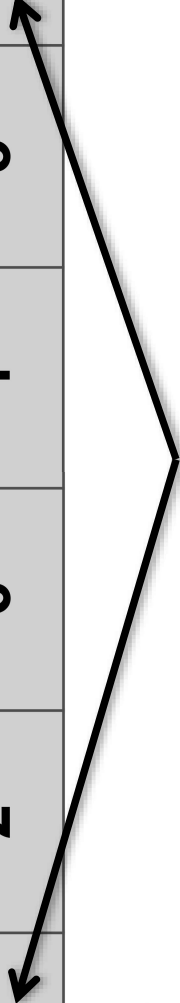

0	1	2	3	4	5
4	2	6	1	3	5

Left

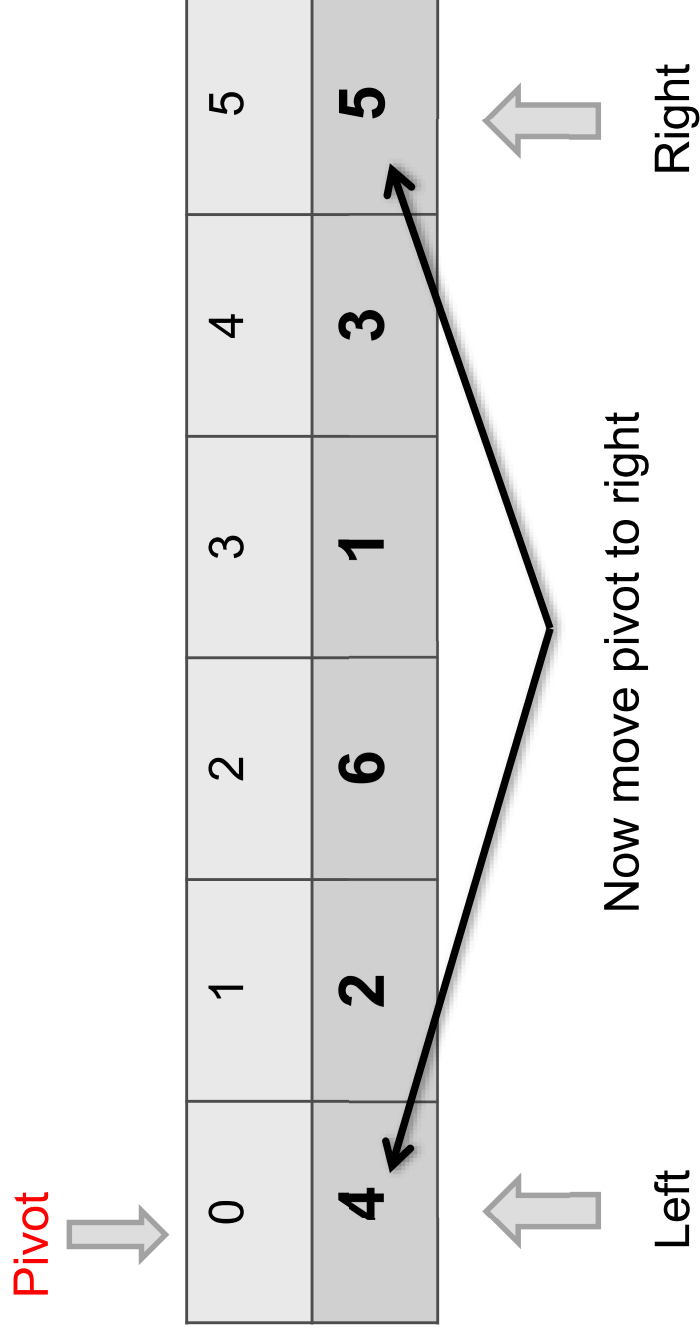

Right

Is Pivot < Left

Pivot = 5
Left = 4

Is Pivot < Left

NO

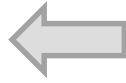

Pivot = 5
Left = 4

So we swap pivot to the right

Pivot

0	1	2	3	4	5
4	2	6	1	3	5

Left

Right

Now the pivot
is pointing at
right

0	1	2	3	4	5
4	2	6	1	3	5

Pivot →

← Left

Right

Now the pivot
is pointing at
right

So we will start
from left

						Pivot 					
0	1	2	3	4	5						
4	2	6	1	3	5						
						 Right					
Left											

Now the pivot
is pointing at
right

So we will start
from left

And move towards right

Pivot

0	1	2	3	4	5
4	2	6	1	3	5

Left

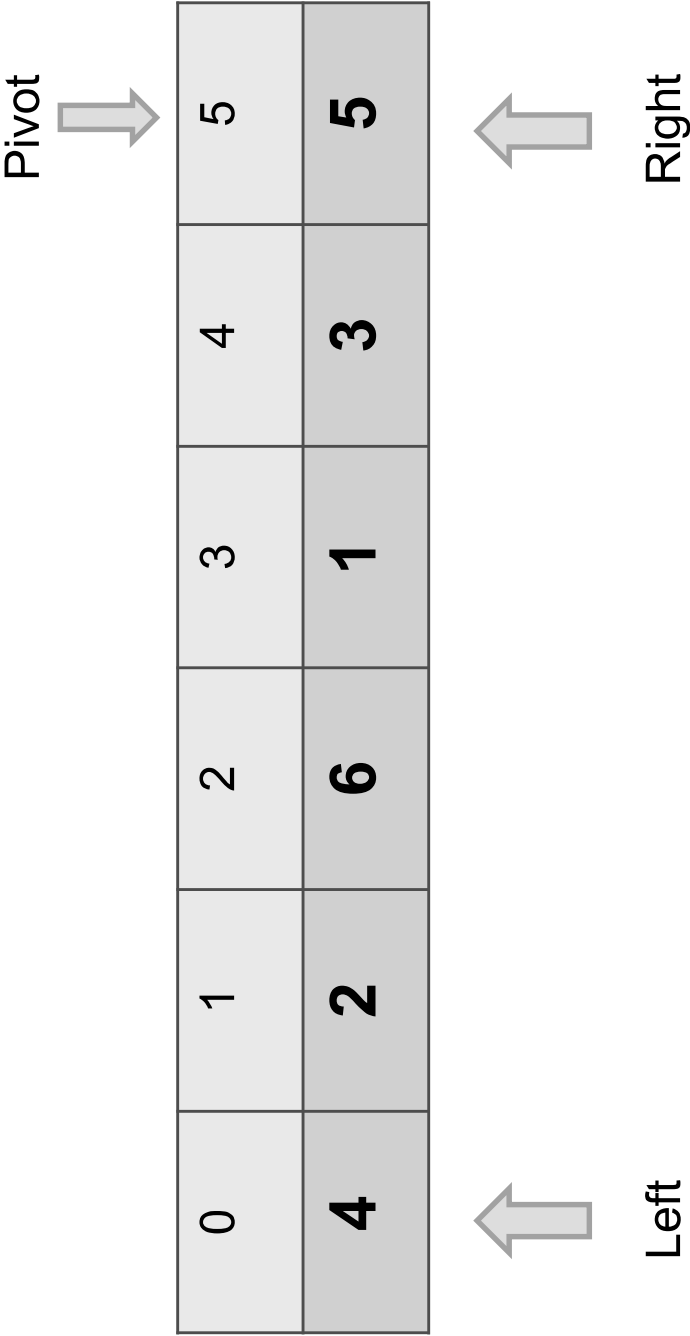

Right

Is Pivot > Left
(5 > 4)

Pivot = 5
Left = 4

Is Pivot > Left
(5 > 4)

Pivot = 5
Left = 4

YES

Pivot

0	1	2	3	4	5
4	2	6	1	3	5

Left

Right

Is Pivot > Left
(5 > 4)

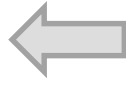

Pivot = 5
Left = 4

YES

So we move left one position
towards right

Pivot 

0	1	2	3	4	5
4	2	6	1	3	5

Left

Right

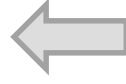

Is Pivot > Left
(5 > 2)

Pivot = 5
Left = 2

Pivot

0	1	2	3	4	5
4	2	6	1	3	5

Left

Right

Is Pivot > Left
(5 > 2)

Pivot = 5
Left = 2

YES

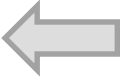

Pivot

0	1	2	3	4	5
4	2	6	1	3	5

Left

Right

Is Pivot > Left
(5 > 2)

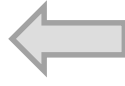

Pivot = 5
Left = 2

YES

So we move left one position
towards right

Pivot 

0	1	2	3	4	5
4	2	6	1	3	5

Left

Right

Is Pivot > Left
(5 > 6)

Pivot = 5
Left = 6

Pivot

0	1	2	3	4	5
4	2	6	1	3	5

Left

Right

Is Pivot > Left
(5 > 6)

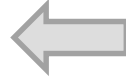

Pivot = 5
Left = 6

NO

Pivot

0	1	2	3	4	5
4	2	6	1	3	5

Left

Right

Is Pivot > Left

(5 > 6)

Pivot = 5
Left = 6

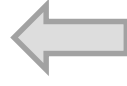

NO

So we swap pivot and left

Pivot

0	1	2	3	4	5
4	2	6	1	3	5

Left

Right

Is Pivot > Left
(5 > 6)

Pivot = 5
Left = 6

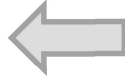

NO

So we swap pivot and left

Pivot

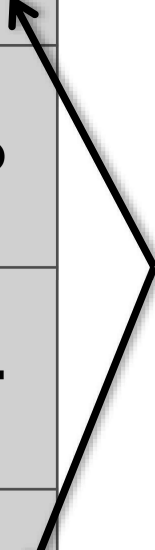

0	1	2	3	4	5
4	2	6	1	3	5

Left

Right

Is Pivot > Left
(5 > 6)

Pivot = 5
Left = 6

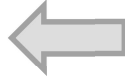

NO

So we swap pivot and left

Pivot

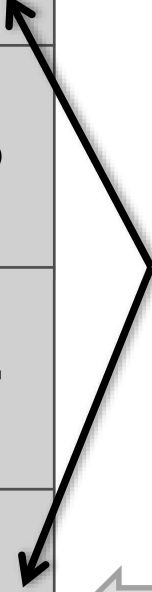

0	1	2	3	4	5
4	2	5	1	3	6

Left

Right

Is Pivot > Left
(5 > 6)

Pivot = 5
Left = 6

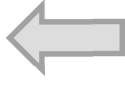

NO

So we swap pivot and left

Pivot

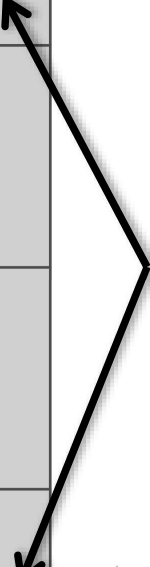

0	1	2	3	4	5
4	2	5	1	3	6

Left

Right

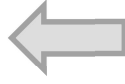

And move the pivot to left

Pivot

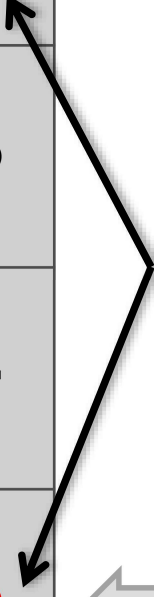

0	1	2	3	4	5
4	2	5	1	3	6

Left

Right

Now the pivot is
pointing at left

Pivot

0	1	2	3	4	5
4	2	5	1	3	6

Left

Right

Now the pivot is
pointing at left

So we will start
from right

Pivot

0	1	2	3	4	5
4	2	5	1	3	6

Left

Right

And move towards left

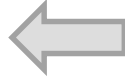

Now the pivot is
pointing at left

So we will start
from right

Pivot

0	1	2	3	4	5
4	2	5	1	3	6

Left

Right

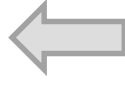

Is Pivot < Right
(5 < 6)

Pivot = 5
Right = 6

Pivot

0	1	2	3	4	5
4	2	5	1	3	6

Left

Right

Is Pivot < Right

(5 < 6)

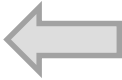

YES

Pivot = 5
Right = 6

Pivot

0	1	2	3	4	5
4	2	5	1	3	6

Left

Right

Is Pivot < Right

(5 < 6)

YES

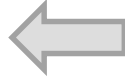

Pivot = 5
Right = 6

Pivot

So we move right one position
towards left

0	1	2	3	4	5
4	2	5	1	3	6

Left

Right

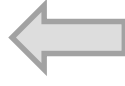

Is Pivot < Right
(5 < 3)

Pivot = 5
Right = 3

Pivot

0	1	2	3	4	5
4	2	5	1	3	6

Left

Right

Is Pivot < Right

(5 < 3)

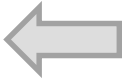

NO

Pivot = 5
Right = 3

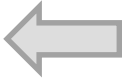

Pivot

0	1	2	3	4	5
4	2	5	1	3	6

Left

Right

Is Pivot < Right

(5 < 3)

NO

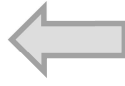

Pivot = 5
Right = 3

So we swap pivot and right

Pivot

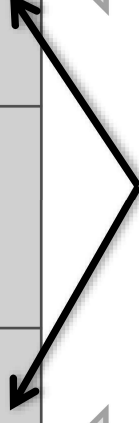

0	1	2	3	4	5
4	2	5	1	3	6

Left

Right

Is Pivot < Right

(5 < 3)

NO

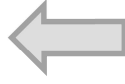

Pivot = 5
Right = 3

So we swap pivot and right

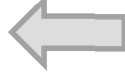

Pivot

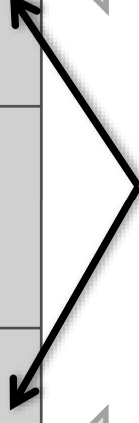

0	1	2	3	4	5
4	2	3	1	5	6

Left

Right

Is Pivot > Right

(5 > 3)

NO

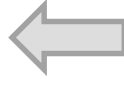

Pivot = 5
Right = 3

So we swap pivot and right

Pivot

0	1	2	3	4	5
4	2	3	1	5	6

Left

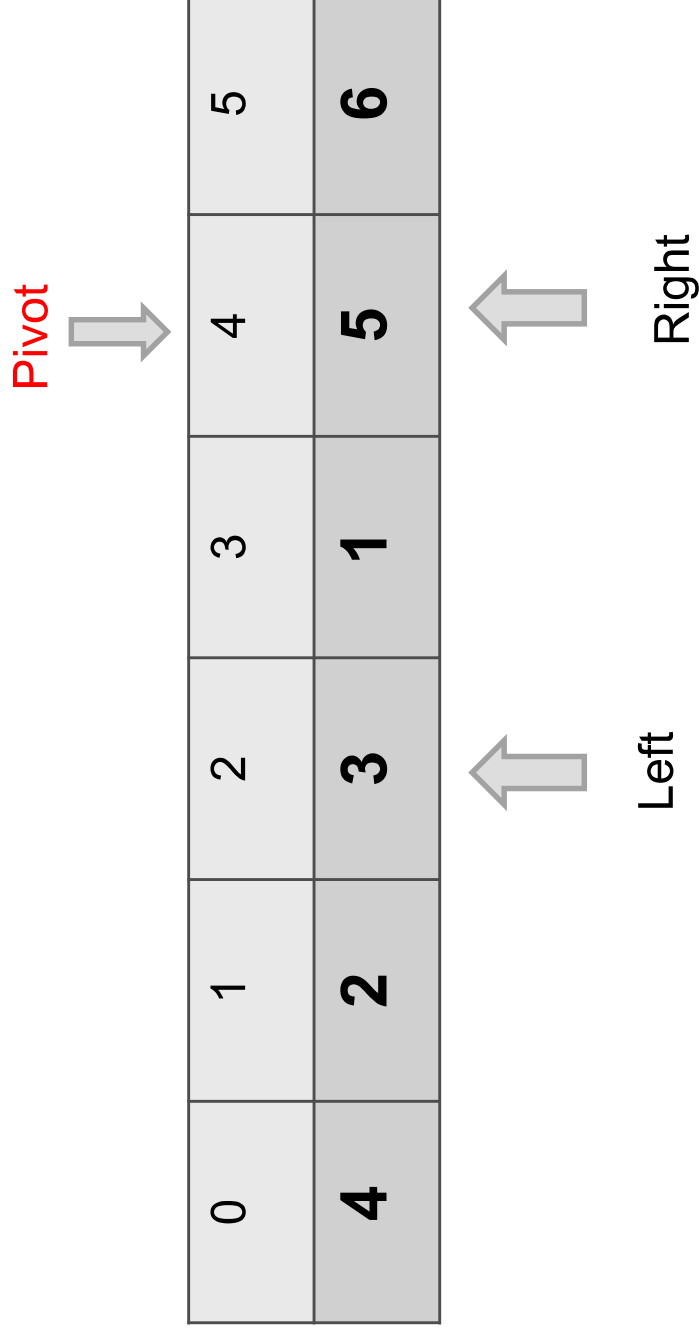

Right

And move the pivot to right

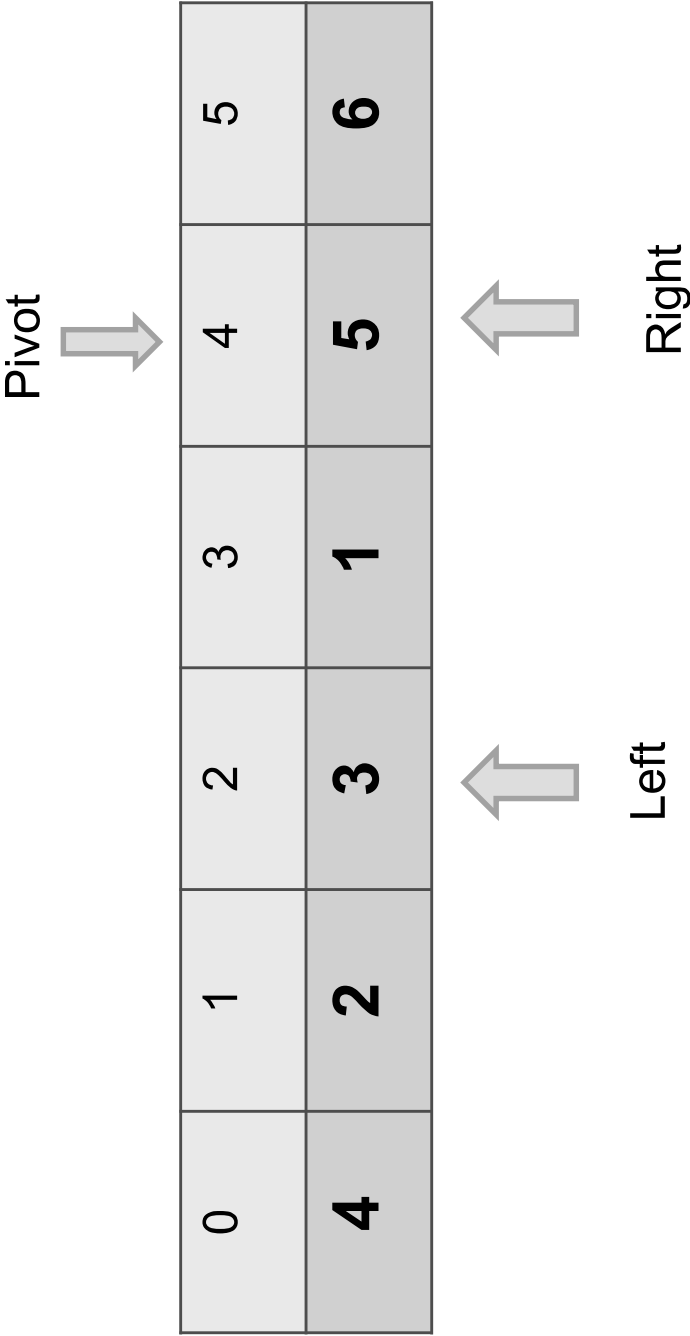

Is Pivot > Left
(5 > 3)

Pivot = 5
Left = 3

Is Pivot > Left
(5 > 3)
YES

Pivot = 5
Left = 3

Is Pivot > Left

(5 > 3)

YES

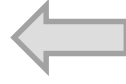

Pivot = 5
Left = 3

So we move left one position
towards right

Pivot

0	1	2	3	4	5
4	2	3	1	5	6

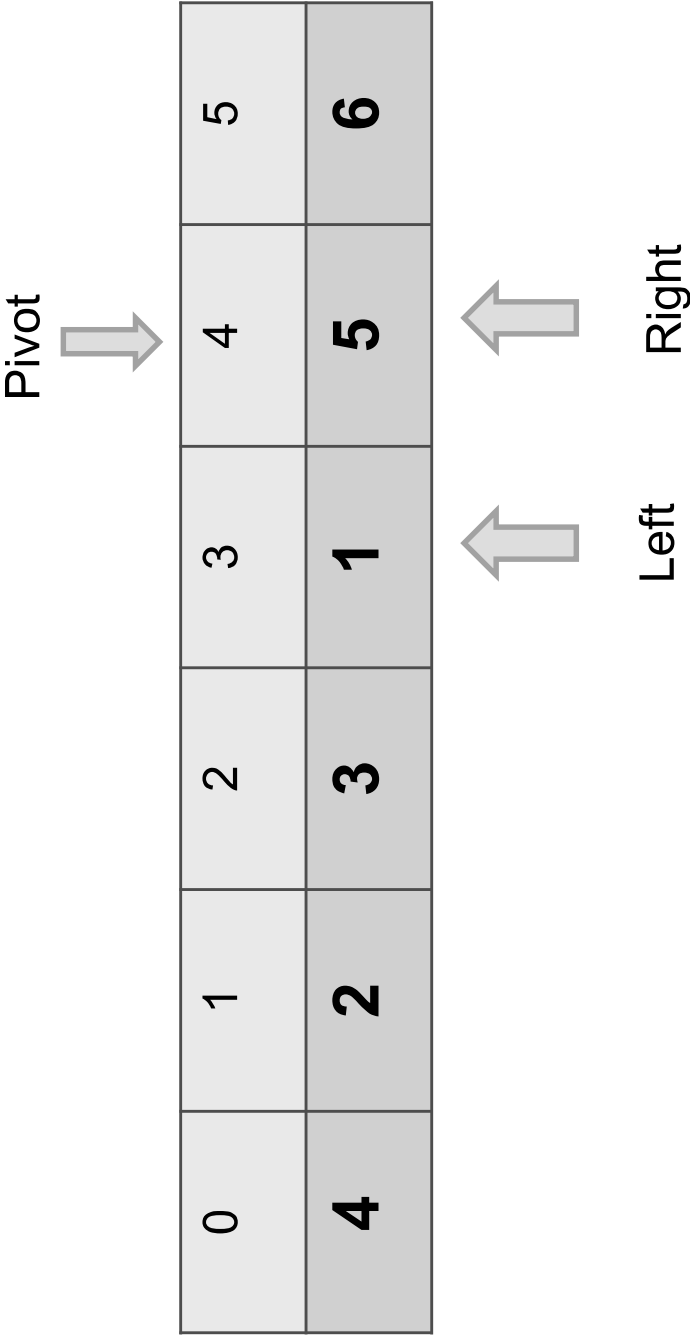

Left

Right

Is Pivot > Left
(5 > 1)

Pivot = 5
Left = 1

Pivot

0	1	2	3	4	5
4	2	3	1	5	6

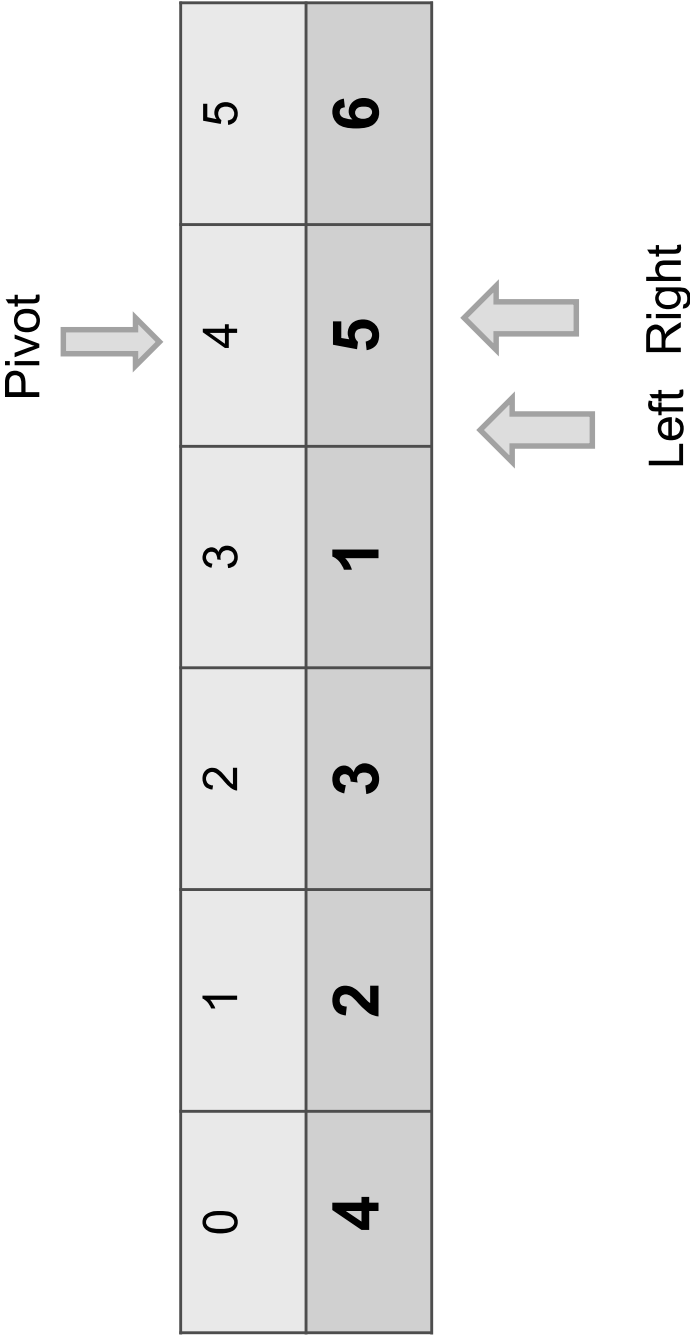

Left

Right

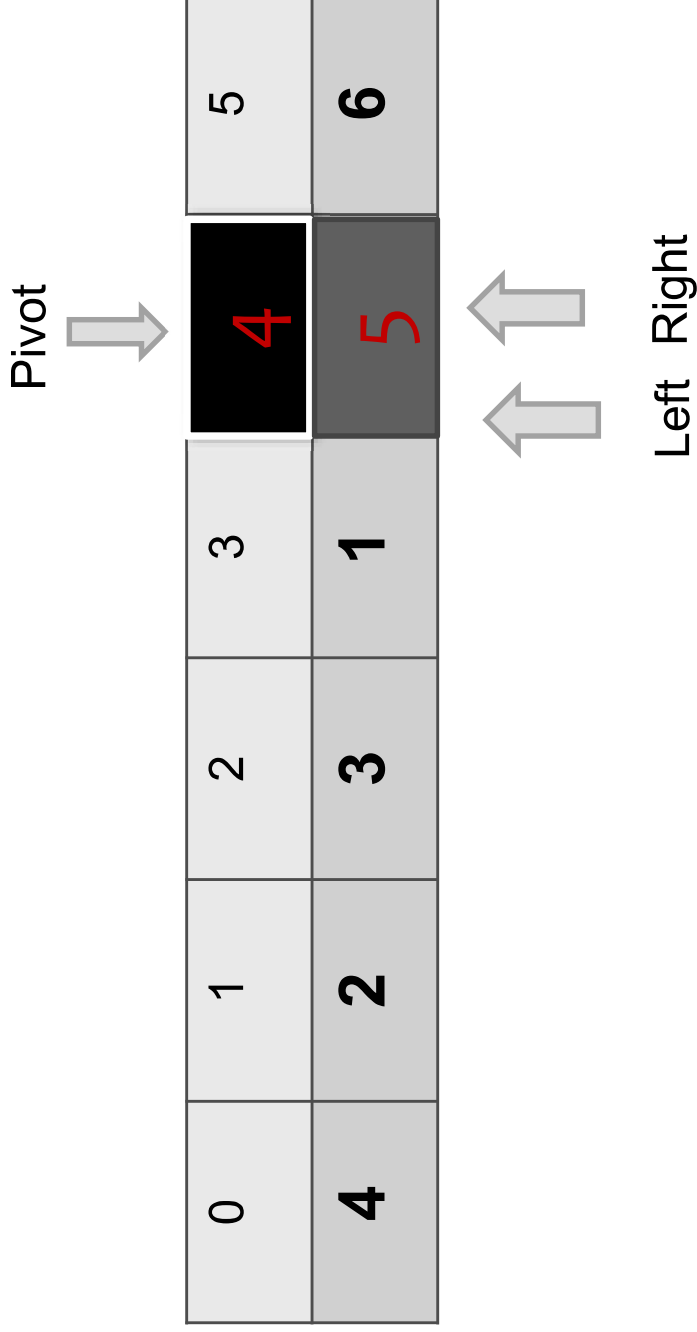

Now both left and right are pointing at the same element of the array

Now both left and right are pointing at the same element of the array

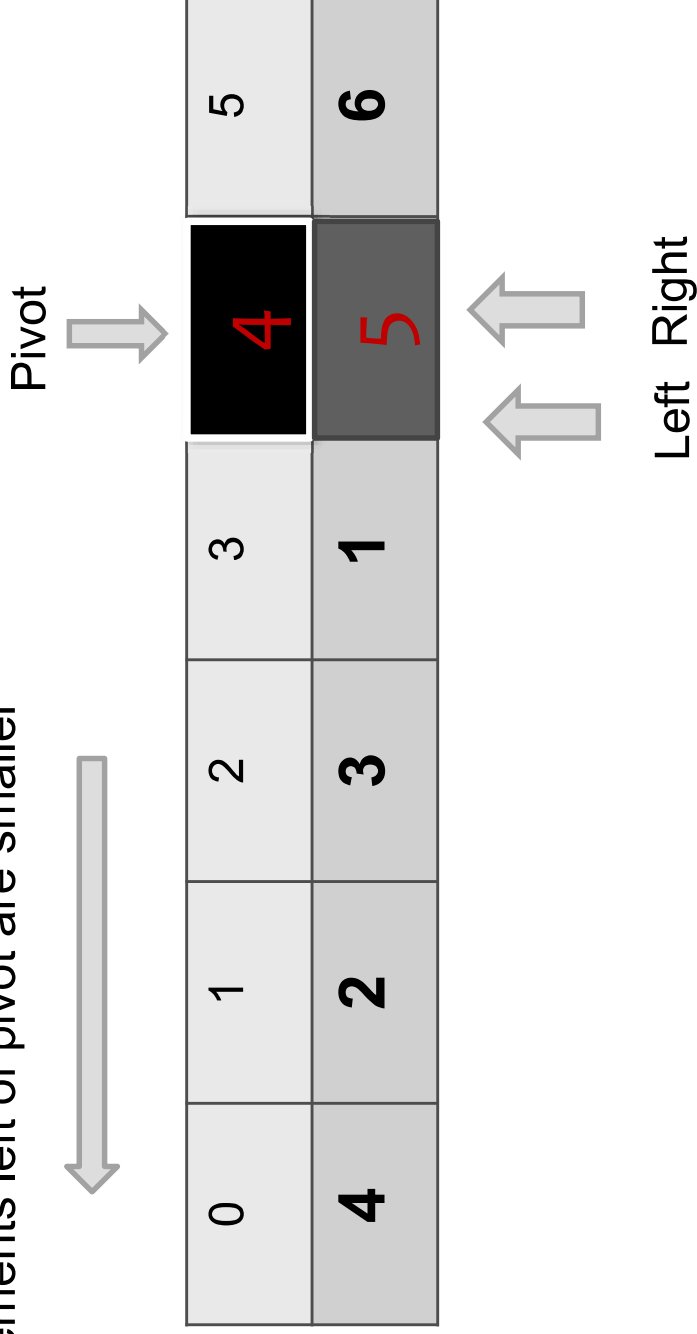

This time 5 is the pivot and it is at the sorted position

Now both left and right are pointing at the same element of the array

This time 5 is the pivot and it is at the sorted position

Elements left of pivot are smaller

Now both left and right are pointing at the same element of the array

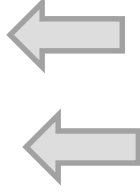

This time 5 is the pivot and it is at the
sorted position

Elements right of
pivot are greater

Elements left of pivot are smaller

Pivot

0	1	2	3		5
4	2	3	1	4	6

Left Right

Now both left and right are pointing at the same element of the array

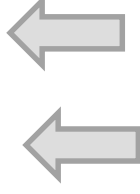

This time 5 is the pivot and it is at the sorted position

Elements right of pivot are greater

Elements left of pivot are smaller

Pivot

0	1	2	3		5
4	2	3	1	4	6

Left Right

So pivot has divided the array into two sub array

Now both left and right are pointing at the same element of the array

This time 5 is the pivot and it is at the sorted position

Elements right of pivot are greater

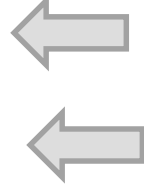

Elements left of pivot are smaller

Pivot

0	1	2	3		5
4	2	3	1	4	6

Left sub array

Right sub array

Left Right

So pivot has divided the array into two sub array

Now both left and right are pointing at the same element of the array

This time 5 is the pivot and it is at the sorted position

Elements right of pivot are greater

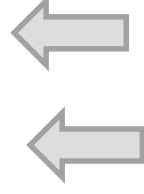

Elements left of pivot are smaller

Pivot

0	1	2	3		5
4	2	3	1	4	6

Left sub array

Right sub array

Left Right

So pivot has divided the array into two sub array

We will now quick sort the left sub array

Is Pivot < Left
(4 < 1)

Pivot = 4
Left = 1

0	1	2	3	4	5
4	2	3	1	5	6

Pivot →

← Right

Left ←

Is Pivot < Left

$$\begin{pmatrix} 1 \\ v \\ 4 \end{pmatrix}$$

ON

Pivot = 4

Left = 1

0	1	2	3	4	5
4	2	3	1	5	6

Pivot →

← Right

Left ←

Is Pivot < Left

(4 < 1)

NO

Pivot = 4
Left = 1

So we swap pivot and right

Pivot

0	1	2	3	4	5
4	2	3	1	5	6

Left

Right

Is Pivot < Left

(4 < 1)

NO

Pivot = 4
Left = 1

So we swap pivot and right

Pivot

0	1	2	3	4	5
1	2	3	4	5	6

Left

Right

Is Pivot < Left

(4 < 1)

NO

Pivot = 4
Left = 1

So we swap pivot and right

Pivot

0	1	2	3	4	5
1	2	3	4	5	6

Left

Right

Now move the pivot to right

Is Pivot < Left

(4 < 1)

NO

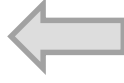

Pivot = 4
Left = 1

So we swap pivot and right

Pivot

0	1	2	3	4	5
1	2	3	4	5	6

Left

Right

The Array is Sorted

0	1	2	3	4	5
1	2	3	4	5	6

Jeanie Lyn Arnoco
